

- MICROLON • MICRO STITCHED OVER-FILTER GOWNS •
- DESIGNED PRIMARILY FOR PACVAC OR ROYAL •
- AIR CONE OR FILTER CONE DESIGN • BACK PACK VACUUM CLEANERS •

New 'Back Pack' vacuum cleaners come ready equipped with a permanent cloth filter bag. This bag (the primary filter) collects the waste, dust and debris. It is emptied as required. Naturally and quite quickly this bag/filter unit becomes soiled and therefore by degrees loses it's ability to breathe.

New replacement filters with their rubber sealing ring are available as a spare part.

**Solution: Xtracta Filter Protectors** provide a cost effective liner/barrier to the vacuum cleaner's "comes with" filter! There are two sorts available:

- The **GREY** (international filter fabric) liner is multi-washable and saves the cost of replacing the more expensive vacuum standard filter. It can be used singularly but more usually overlapping with the issued filter as a liner.

And/or

- The **RED** "Microlon Micro Stitched" Filter gown is simply to line the conventional filter. All dust and debris is collected by this barrier which can then be easily removed and "shaken clean"- the Teflon effect!! Use it time and time again. If necessary wash it. You never need to spend money on consumables again !!!

**Note:** Both of these barriers allow a miniscule amount of ultra fine to pass to the second and third filter. Filters breathe. They allow air to pass through!

Both of these products provide a cost effective solution in maintaining the suction and performance of your cleaner. In larger sizes they have been used in commercial vacuum cleaners since 2002 – prolonging the life of these machines and their motors.

VBRB 3473 RED FILTER LINER

VBRB 3474 RED FILTER LINER

**Care:**

*(If deemed necessary or if the filter gets wet)*

- Hand or gentle machine wash
- DO NOT BLEACH
- DRY Clean OK
- DO NOT tumble at high temp
- Warm Iron – OK (You've got to be joking!)

**It can be used with many different brands and models!**
